

EX. NO : 04

BUILD YOUR FIRST ANDROID APP

AIM

To create a simple Android application using Kotlin, understand Activity and layout, and display output on the screen.

PROCEDURE

1. Open **Android Studio**.
2. Create a new project → Empty Activity → Select Kotlin → Finish.
3. Open **res/layout/activity_main.xml** and design the layout using TextView and Button.
4. Open **MainActivity.kt**.
5. Inside onCreate(), connect layout using setContentView().
6. Use findViewById() to access UI elements.
7. Add button click logic to change TextView text.
8. Run the application on an emulator or device.
9. Observe the output on screen.

CODE

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="vertical"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:padding="16dp"
    android:gravity="center">
    <TextView
        android:id="@+id/tvMessage"
```

```

        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello, Android!"
        android:textSize="24sp"
        android:padding="16dp"/>
<Button
    android:id="@+id/btnClick"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="Click Me"/>
</LinearLayout>

```

MainActivity.kt

```

package com.example.myfirstapp

import android.os.Bundle
import android.widget.Button
import android.widget.TextView
import androidx.appcompat.app.AppCompatActivity

class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        val tvMessage = findViewById<TextView>(R.id.tvMessage)
        val btnClick = findViewById<Button>(R.id.btnClick)
        btnClick.setOnClickListener {
            tvMessage.text = "Button Clicked! Welcome to Android."
        }
    }
}

```

OUTPUT

RESULT

Thus, a simple Android application was successfully created using Kotlin, demonstrating Activity, layout design, and event handling with output displayed on the screen.
